Cost Overrun Insights | Chat with Vistaar AI

Idle Time

Idle time is still severe and got worse: 5,001.27 min idle out of 8,527.69 min available — 58.65% idle, up 5.95 points from the 52.70% baseline. Uptime was only 3,526.42 min across 21 on/off cycles. Roughly six in ten available machine minutes produced nothing.

Financial Impact

₹72.02 L loss per incident

Key Issue

Idle share at 58.65% with 21 power cycles fragmenting the week.

Recommendation

This week, cut the 21 on/off cycles by consolidating start-ups into fixed shift windows and log a reason code for every stop over 10 minutes so the idle cause is visible.
